for your VICTORY VEGETABLE GARDEN

In these days when maximum production in all lines counts for so much, the growing of vegetables in the home garden is of particular importance to maintain the health of the nation and relieve shipping facilities as much as possible. Home-grown vegetables freshly harvested and promptly prepared for the table not only are more nutritious and wholesome but they are of better flavor and more palatable than the usual market produce.

The carefully planned garden insures maximum returns and by planting succession crops fresh, wholesome produce may be had continuously from early summer until severe frost.

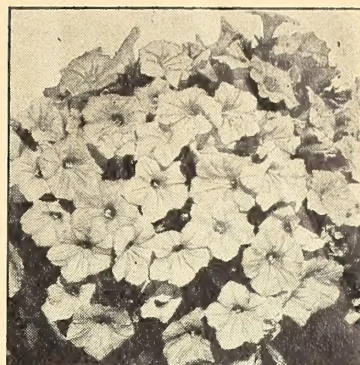

Refer to page 28 of this book where you will find a Vegetable Planting Calendar which tells what to plant during each month of the growing season. Of course the dates may have to be adjusted for your location in accordance with the remarks made in the introduction to this calendar. If space permits plant or grow enough vegetables for canning and winter storage also. Beets, Carrots, Turnips, and Ruta Baga will keep well either in a cool cellar or an outdoor pit.

Petunia Igloo

All America Selections for 1943

Silver Medal Awards

Petunia ①

3412 America Alldouble

Distinctly different from all other double Petunias, — 100% true for doubleness. This is the first of the "All-double Petunias" originated in this country to be offered to American gardeners. The plants branch freely but retain a desirable compactness. They grow about a foot tall and make a showy circular cushion 18 in. in diameter. The flowers measure up to $2\frac{1}{4}$ in. in diameter and are an appealing sparkling rose-pink color. The small mid-green foliage has little stickiness. Pkt. 50c; large pkt. \$2.25.

Marigold ①

Dwarf Double French

2944 Sunkist

The plants of this Silver Medal winner greatly resemble those of Butter Ball which was introduced last year. They are of compact, dwarf growth and therefore highly desirable for dwarf beds and borders, yet the individual flower stems are long enough to permit artistic arrangement of the flowers in vases of moderate size. Sunkist belongs to the Harmony type of Marigolds and has attractive double rich orange blooms. Pkt. 25c; large pkt. 60c.

Bronze Medal Award

3308 Petunia, Dwarf Compact Igloo ①

A delightful new Petunia making dense bushes of neat, compact growth covered continuously with a grand display of flowers from early summer until hard frost in the fall. The individual blooms are only $1\frac{1}{2}$ inches in diameter but they are produced so freely as to cover the plants completely. They are a pleasing creamy white with a more pronounced yellow tint in the throat. Pkt. 25c; large pkt. 75c.

Honorable Mention

Single Bedding Petunia ①

3332 English Violet

This belongs to the hybrida nana class and adds a delightful new color to this valuable group—a bright purple-violet of velvety richness, set against a dense mass of bright green foliage which sets off the flowers to good advantage. Pkt. 25c; large pkt. 75c.

Cosmos, Giant Sensation ①

It's Easy To Plan Your Garden By Following The Symbols Used Throughout This Book

The symbols shown below with explanations will help you much to plan your garden. They stand out from the text and therefore make it easy to pick out the kinds suited to specific conditions.

First of all most gardeners want to know if a plant is an annual, biennial, or perennial. In the case of perennials we have further identified them as half hardy, hardy, and tender, so that you may know about any winter protection required.

Climbing plants are wanted by many gardeners because they take so little space and add incomparable beauty to garden houses, trellises, fences, posts, etc.

With rock gardens still of major interest to thousands of gardeners the little triangle (\triangle) will quickly direct the eye to those suited to this purpose.

Very important to success is the knowledge as to the amount of light required by certain plants in order to make the best display. There are comparatively few which will grow well in dense shade, but those suited to semi-shade will serve in most instances. Of course practically all those which do well in semi-shade also give a fine display in an exposure with full sun.

(A)=Annual. Annual flowers complete their life circle within one growing season. They must be sown every year.

(B)=Biennial. These require two years to bloom. Seed sown during one season will produce flowering plants the second year. Occasionally they live longer than two years.

[HHP]=Half-Hardy Perennial. These cannot stand much frost but may be kept alive by bringing indoors, placing in the cold frame, or covering securely during the winter.

[HP]=Hardy Perennial. These last for several years, withstanding considerable frost provided the soil is well drained.

[TP]=Tender Perennial. Tender perennials may be kept growing throughout the year in the house or greenhouse. Many of them are showy bedding plants for a summer and fall display.

§=Climbing Plants. Climbing and trailing plants which are best grown with a support on which they can climb.

\triangle =Suited to Rock Garden. Most plants suited to rock gardens are also desirable for dwarf beds and borders. The smaller the rock garden the smaller the plants should be.

\odot =Suited to Semi-Shade. Most plants suited to semi-shade also do well in a sunny exposure. Semi-shade means some sun for part of the day or a location where the plants receive ample indirect light from above.

\bullet =Suited to Shade. Few plants do in dense shade but those marked in this way will be found quite satisfactory. There are no annuals which will bloom in deep shade.

***** Seeds marked with a * often are sown in late fall outdoors to germinate the following spring. Spring germination is quickest if they are placed in water and set in the freezing chamber of an electric refrigerator. To secure the beneficial effect of alternate freezing and thawing, thaw them out once a week and then freeze again. They will be ready for sowing after two to three weeks of this treatment.

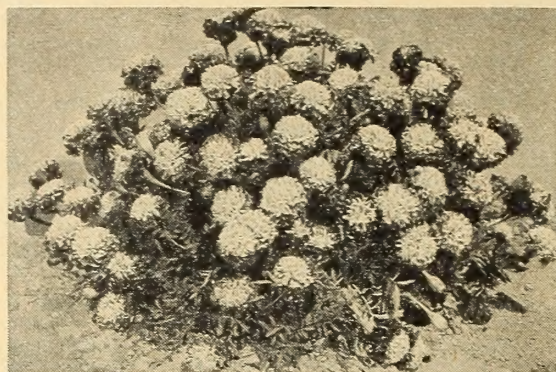

All America Selections of 1941

These all America Selections from 1941 still are considered among the top ranking developments in annual flowers. A great many gardeners availed themselves of the opportunity of enjoying them during the past two seasons and we again offer them to you here, grouped together for easy reference for your enjoyment in 1943.

Aids to Better Gardening

'TWIST-EMS'

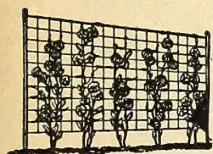

Twist-Ems save the tedious work of tying plants with twine or raffia. Simply put around the stem and support, twist, and the plant is securely fastened. The wire running through the center of the tape makes them unbreakable while the tape protects the stem against injury. Their deep green color blends with the foliage and makes them altogether inconspicuous. Twist-Ems are the most convenient and easiest way to support all kinds of plants in a quick and unobtrusive manner.
